

# MB-10 Tablets®:

## Disinfectant and Sterilant

**MB-10 Tablets** are the most convenient way yet to deliver the benefits of Chlorine Dioxide.

Just drop our effervescent tablets into a pint, quart, or gallon of water and within minutes they will dissolve and produce a solution of chlorine dioxide.

Chlorine dioxide is a safe, stable, multi-functional compound which exists as a gas. This unique technology now allows for the safe and effective generation of chlorine dioxide, a gas which is released via our effervescent tablets into solution or into the air. The tablets are shelf-stable for 3 years in the pouch, and 7 days once dissolved.

**MB-10 Tablets** are perfect for decontamination of quarantine and isolation holding facilities, surgery and necropsy rooms, air locks, bio-safety hoods, animal receiving areas, animal transporters, carcass refrigeration and storage areas, decontaminating environmental enrichment devices, animal drinking water system purification, and other areas requiring sanitary hard surfaces.

### SAFE

Chlorine Dioxide is safe and stable so your employees can breathe easy

### TUBERCULOCIDAL

Kills Mycobacterium Bovis in five minutes

### FAST

Eradicates many bacteria and viruses in just ten minutes

### COMPATIBLE

Relatively neutral pH balance and excellent material compatibility
